

Question: Why should my home or business be more informed on Network Security?

Answer 1.A: Network Security is something many companies & home office or residential customers don't understand completely. They rely on the information that comes from networking companies to configure products that shouldn't have been produced for public use in the first place. No worries, that's where Zio Inc comes in; We have used every type of networking equipment possible from the basic home router to Cisco load balanced switches. We know what works, and what doesn't. With almost every model of all major networking brands (TrendNet, Netgear, D Link, Cisco (Linksys) and others) under our belt we can explain what networking device would best fix or fit your personalized situation.

Answer 1.B: Taking 1.A into consideration, Security is also something we handle at a professional level. Different wireless and wired security measures have been practiced again and again to provide you with the highest level of network security when it comes to WPA, WEP and other wireless security protocols.

Network Installation & Security - Home & Home Office:
